Multi-Vendor Network Security Compliance Audit

Audit Report

Device: Fortinet-Test
Vendor: Fortinet
Audit ID: 6ab8bc1aa62d83cbb6d750a
Generated: 27/9/2026, 2:29:52 pm

Compliance Score

25%

Audit Summary

Total Checks: 4
Passed Checks: 1
Failed Checks: 3
Critical Findings: 0
High Findings: 2
Medium Findings: 3
Low Findings: 1

Security Findings

1. Telnet Access Enabled

Severity: High
Category: Remote Access
Description: Telnet management access is enabled on a Fortinet interface. This can expose administrative communication to interception.
Detected Configuration: set allowaccess ping https ssh http telnet
Recommended Fix: Remove Telnet from interface management access and use SSH instead.

2. SSH Management Access Enabled

Severity: Low
Category: Remote Access
Description: SSH management access is enabled on a Fortinet interface.
Detected Configuration: set allowaccess ping https ssh http telnet
Recommended Fix: Keep SSH enabled only where required and restrict management access to trusted networks.

3. Broad Firewall Policy

Severity: Medium
Category: Access Control

Description: A Fortinet firewall policy allows a broad source or destination.

Detected Configuration: set srcaddr "all"

Recommended Fix: Restrict source and destination objects to only the required networks.

4. Broad Firewall Policy

Severity: Medium

Category: Access Control

Description: A Fortinet firewall policy allows a broad source or destination.

Detected Configuration: set dstaddr "all"

Recommended Fix: Restrict source and destination objects to only the required networks.

5. All Services Permitted

Severity: High

Category: Access Control

Description: A Fortinet firewall policy permits all services.

Detected Configuration: set service "all"

Recommended Fix: Restrict the policy to only the required services and ports.

6. Administrative Password Configuration Detected

Severity: Medium

Category: Authentication

Description: A Fortinet administrative password configuration was detected.

Detected Configuration: set password "example-password"

Recommended Fix: Use strong administrative credentials and ensure configuration files are properly protected.
